Job Description

An SDE-2, or Software Development Engineer II, is a mid-level software engineering role with a focus on designing, developing, and maintaining complex software systems.

Design, develop, and implement software features across the entire lifecycle. This involves working collaboratively to design solutions, build new features, and enhance existing ones.

Collaborate with cross-functional teams like product managers and business stakeholders to understand their needs and translate them into technical solutions.

Write clean, well-documented, and efficient code that adheres to best practices and coding standards.

Effectively test code to ensure functionality, reliability, and performance.
